

PROFESSIONAL SUMMARY

Cloud DevOps Engineer 3+ yrs: AWS/Azure/GCP, K8s, Terraform, GitOps, CI/CD. Achievements: 60% faster deployments (Terraform/ArgoCD/Helm), GitOps 50+ microservices, MTTR 40% reduction (Prometheus/Grafana/Loki/Tempo/Datadog), 200+ resources via Terraform, ~70% fewer vulns (Trivy/Cosign/Kyverno), 25% cost savings (Kubecost). Stack: AWS/Azure/GCP, K8s, Helm, ArgoCD/Flux, Terraform, Jenkins, GitHub Actions, Python/Go/Bash, Prometheus/Grafana/Loki/Tempo/Datadog/Trivy/Vault/Istio. Certs: AZ-900, AI-900. Pursuing: AWS SAA, AZ-104, CKAD, Terraform Associate. Hyderabad/Bengaluru, Hybrid/Remote, 3mo notice (negotiable).

Cloud

- AWS (EKS, EC2, VPC, Lambda, ECS, RDS, S3, CloudFormation)
- Azure (AKS, Functions, DevOps, Key Vault)
- GCP (GKE, Cloud Run, Cloud Build, Artifact Registry)

K8s & Containers

- Kubernetes (EKS/AKS/GKE), Helm, Kustomize, Argo CD, Flux v2
- Docker, Containerd, Container Security (Trivy, Cosign, Kyverno)

CI/CD & GitOps

- Jenkins, GitHub Actions, GitLab CI, Azure DevOps
- GitOps: Argo CD, Flux v2, Kustomize, Helmfile

IaC

- Terraform, Terragrunt, CloudFormation, Ansible, Packer

Monitoring

- Prometheus, Grafana, Loki, Tempo, Datadog, CloudWatch, OpenTelemetry

Security

- Vault, AWS Secrets Manager, Trivy, SonarQube, Cosign, Kyverno, Istio

Scripting

- Python (boto3, Azure SDK), Go, Bash, YAML/JSON templating

Databases

- RDS, DynamoDB, ElastiCache, CloudSQL, S3

Networking

- VPC, ALB/NLB, Route 53, CloudFront, VPN, DNS, TLS/SSL

CERTIFICATIONS

- AZ-900 (2023)
- AI-900 (2023)
- Cloud & DevOps - IIT Roorkee (2023)
- AWS SAA (pursuing)
- AZ-104 (pursuing)
- CKAD (pursuing)
- Terraform Associate (pursuing)

Cloud DevOps Engineer

LTM

Hyderabad | Jan 2024 - Present

- Support app deployments across dev/staging/prod, validate releases, coordinate deployments, monitor health.
- On-call prod support for Sev-1/2 incidents via Azure DevOps; restore availability within SLA.
- Lead bridge calls for critical incidents: investigation, impact assessment, stakeholder comms, restoration.
- Resolve Jenkins CI/CD pipeline failures by analyzing logs, identifying issues, validating fixes.
- Monitor app/infra health via Prometheus, Grafana, AWS CloudWatch; proactive troubleshooting.
- Collaborate with dev/QA/infra teams during release cycles for validation and post-deployment verification.
- Apply Cloud/DevOps concepts using AWS, Terraform, Docker, K8s, Git, Argo CD, Azure; strengthen automation.
- Implemented GitOps with Argo CD managing 30+ microservices across dev/staging/prod, reducing errors 65%.
- Automated infra provisioning with Terraform/Terragrunt managing 150+ resources across AWS/Azure with reusable modules.
- Established container security scanning in CI via Trivy, Cosign, Kyverno; blocking vulnerable images, policy-as-code.

Cloud DevOps Engineer (Project)

IntelliPaat/IIT Roorkee

Remote | 2022-2023

- Designed end-to-end CI/CD integrating GitHub, Jenkins, Docker, Terraform, K8s for microservices.
- Built HA AWS three-tier architecture (VPC, EC2, ALB, Auto Scaling, IAM, RDS, Route 53, S3) with multi-AZ achieving 99.99% uptime.
- Configured secure networking with public/private subnets, security groups, routing, NAT Gateways, IAM policies (least-privilege).
- Implemented scalable compute with ALB and Auto Scaling Groups for availability during traffic spikes.
- Integrated CloudWatch with custom metrics, alarms, SNS notifications for infra health and post-deployment validation.
- Built multi-region Azure infra (Virtual Networks, VMs, Load Balancer, Traffic Manager) for HA and traffic distribution.
- Configured Azure networking (VNet peering, NSGs, Application Gateway) and validated regional failover via Traffic Manager.
- Strengthened cloud architecture, deployment strategies, operational troubleshooting via end-to-end resilient implementations.

Multi-Cloud CI/CD Platform

Tech: AWS, Azure, Terraform, Jenkins, GitHub Actions, Argo CD, Helm, K8s, Docker

- End-to-end CI/CD across AWS/Azure managing 50+ microservices; GitHub Actions build/test, Terraform infra, Argo CD GitOps
- Reduced deployment 45min to 12min (73% improvement) with 99.9% success; automated rollback, canary, Kyverno/OPA
- Zero-downtime via blue-green with automated health checks

HA Three-Tier AWS App

Tech: AWS (VPC, EC2, ALB, ASG, RDS, Route 53, S3, CloudWatch, IAM, CloudFormation)

- HA three-tier web app with multi-AZ VPC, public/private subnets, NAT Gateways, ALB, Auto Scaling (3-50), Multi-AZ RDS
- Route 53 health checks, S3 static with CloudFront CDN, SSL/TLS via ACM, 99.99% uptime, automated failover

Azure Multi-Region GitOps

Tech: Azure (AKS, VNet, Load Balancer, Traffic Manager, Key Vault), Terraform, Flux v2, Helm

- Multi-region Azure (East US, West Europe) with VNet peering, global Traffic Manager, Flux v2 GitOps with Kustomize for 100+ microservices
- Azure Key Vault for secrets, Azure Monitor for observability, Private Endpoints; failover <30s, 40% cost savings

Observability Stack GitOps

Tech: Prometheus, Grafana, Loki, Tempo, Alertmanager, Datadog, K8s, Helm, Argo CD

- Full observability via Helm/Argo CD: metrics, logs, traces unified in Grafana; Datadog APM reducing MTTR 40%
- 500+ dashboards, 200+ alerts with Alertmanager/PagerDuty; 50GB logs/day, 1M+ metrics/sec, 99.9% availability

Serverless Event-Driven

Tech: AWS Lambda, EventBridge, SQS, SNS, Step Functions, API Gateway, DynamoDB, CloudWatch

- Event-driven order processing 1M+ events/day with 99.9% reliability; Lambda + Step Functions replacing EC2, 90% cost reduction
- Dead-letter queues, retry policies, X-Ray tracing; sub-second latency, auto-scaling, zero operational overhead

EDUCATION

B.Tech (Mechanical)

Sree Vidyanikethan Engg College | 2019-2023

ACHIEVEMENTS

- Appreciation for consistent contribution, collaboration, support during project deliverables at LTM
- Completed multiple end-to-end Cloud/DevOps implementations: AWS, Azure, Kubernetes, Terraform, Jenkins, Docker, CI/CD
- GitOps workflows reducing deployment errors by 65% across 30+ microservices
- Container security pipelines blocking 70%+ vulnerable images before production
- Cloud cost optimization by 25% via FinOps (Kubecost, Compute Optimizer)
- Active contributor to internal DevOps knowledge sharing and documentation improvements
