Professional Summary

Cloud & DevOps Engineer with 2.5+ years of IT experience and hands-on expertise in building cloud infrastructure, CI/CD pipelines, and containerized application deployments using AWS, Azure, Terraform, Jenkins, Docker, Kubernetes, Git, and Argo CD. Experienced in supporting enterprise application releases, production incident handling, deployment validation, monitoring, and troubleshooting while strengthening practical cloud engineering capabilities through multiple end-to-end DevOps projects. Microsoft Certified in Azure Fundamentals (AZ-900) and Azure AI Fundamentals (AI-900).

Technical Skills

Cloud: AWS (EC2, VPC, IAM, S3, Route 53, ALB, RDS, CloudWatch), Azure

Containers & Orchestration: Docker, Kubernetes, Argo CD

CI/CD & Version Control: Jenkins, Azure DevOps, Git, GitHub, GitHub Actions

Infrastructure as Code: Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana, CloudWatch

Security: Trivy, SonarQube

Programming: Python, Bash, Shell Scripting

Operating Systems: Linux

Core Concepts: CI/CD, GitOps, Infrastructure as Code, Containerization, Cloud Networking, Cloud Security, Incident Management, Root Cause Analysis, High Availability

Professional Experience

Cloud & DevOps Engineer

Jan 2024 – Present

LTM

Hyderabad, India

- Supported application deployment activities across development, staging, and production environments by validating releases, coordinating deployment activities, and monitoring application health after deployment.
- Participated in on-call production support and incident management, handling severity incidents using Azure DevOps Boards while collaborating with cross-functional teams to restore application availability.
- Attended bridge calls during critical production incidents, assisting in issue investigation, impact assessment, stakeholder communication, and service restoration activities.
- Investigated Jenkins CI/CD pipeline failures by reviewing build logs, identifying deployment issues, validating fixes, and supporting successful application releases.
- Monitored application and infrastructure health using Prometheus, Grafana, and AWS CloudWatch dashboards to identify operational issues and support proactive troubleshooting.
- Collaborated with development, QA, and infrastructure teams during release cycles, environment validation, and post-deployment verification to ensure stable software delivery.
- Applied Cloud and DevOps concepts through continuous hands-on implementation using AWS, Terraform, Docker, Kubernetes, Git, Argo CD, and Azure while strengthening infrastructure automation and deployment practices.

Projects

End-to-End CI/CD Automation Platform using AWS, Jenkins, Docker & Kubernetes

- Designed and implemented an end-to-end CI/CD workflow integrating GitHub, Jenkins, Docker, Terraform, and Kubernetes to automate infrastructure provisioning and application deployment.
- Provisioned AWS infrastructure using reusable Terraform modules and deployed containerized applications on Kubernetes using declarative deployment manifests.
- Configured Jenkins pipelines for automated build, Docker image creation, deployment validation, and continuous delivery while following Git-based version control practices.
- Practiced deployment troubleshooting, Kubernetes rollout validation, pod and service restarts, and rollback procedures to strengthen application recovery and operational workflows.

Highly Available AWS Three-Tier Application Deployment

- Designed a highly available AWS architecture using VPC, EC2, Application Load Balancer, Auto Scaling, IAM, Amazon RDS, Route 53, and S3 for a web application deployment.
- Configured secure networking components including public and private subnets, security groups, routing, and IAM policies following cloud security best practices.
- Implemented scalable compute infrastructure with load balancing and automated scaling to improve availability and fault tolerance.
- Integrated CloudWatch monitoring to observe infrastructure health and validate application availability after deployment.

Azure Multi-Region Infrastructure Deployment

- Built a multi-region Azure infrastructure using Virtual Networks, Virtual Machines, Load Balancer, and Traffic Manager to understand high availability and traffic distribution concepts.
- Configured Azure networking components and validated regional failover behavior through Traffic Manager-based routing policies.
- Applied Infrastructure as Code, cloud networking, deployment automation, and monitoring concepts while implementing resilient cloud infrastructure.
- Strengthened practical understanding of cloud architecture, deployment strategies, and operational troubleshooting through end-to-end implementation.

Certifications

- Microsoft Certified: Azure Fundamentals (AZ-900)
- Microsoft Certified: Azure AI Fundamentals (AI-900)
- Advanced Certification in Cloud Computing & DevOps – IIT Roorkee (Intellipaat)

Education

Bachelor of Technology (Mechanical Engineering)

2019 – 2023

Sree Vidyanikethan Engineering College

Achievements

- Received appreciation for consistent contribution, collaboration, and support during project deliverables at LTM.
- Completed multiple end-to-end Cloud and DevOps implementation projects covering AWS, Azure, Kubernetes, Terraform, Jenkins, Docker, and CI/CD automation.
